

EMS Employment – St. Mark’s Hospital St. Mark’s Hospital in Salt Lake City has expanded the role of paramedics within our ERs, empowering them to provide patient care to the full extent of their licensure. Our paramedics provide hands-on patient care for the duration of a patient’s ER visit. They are experienced in patient assessment, ALS/BLS skills and interventions, pharmacology, IV establishment, computerized charting, and other general patient care skills. This is not a “patient care technician” position; our paramedics work at an advanced level, alongside registered nurses and other providers. This position offers education and experience that are not available in a typical EMS job, and this opportunity is not available in other area hospitals. We are looking for experienced, responsible, confident paramedics who work well with others. If you would like to enhance your professional skills in a busy emergency room setting, we would love to hear from you.
